BENCHMARKS

K

J Jackson

Benchmarks

Two medians, split by format — a video and a static score are never averaged together. Platform medians and a recent-vs-earlier trend show alongside, once there's enough history to trust them.

STATIC · SORTED BY SCORE

median 0

Nothing analyzed in this format yet

VIDEO · SORTED BY SCORE

median 63

TikTok median 69 · Meta median 63

TT	gengar 9x16.mp4		69
META	video_2.mp4		63
META	video_1.mp4		63
META	video_1.mp4		50

WHY THESE STAY SEPARATE

A video ad and a static ad are scored against different criteria sets — a 70 on video and a 70 on static aren't the same claim. Selecting one of each for comparison shows only the criteria they share, and says so. It never blends the two into one number.

RECURRING FAILURES ACROSS YOUR LIBRARY

Criteria that have failed on more than one asset — an exact count, not a fabricated pattern.

Cut frequency vs platform pacing	TIER 1	failed 3x
Hook window face detected	TIER 1	failed 3x
Native feel vs polished ad	TIER 2	failed 3x
Hook window audio onset	TIER 1	failed 2x
Safe-zone overlap across full runtime	TIER 1	failed 2x
Product first appearance	TIER 2	failed 2x

■ Meets guidance ■ Neutral ■ Fails a check

TIER 1 · STRUCTURAL 5 / 10

Aspect ratio Pass
1080×1920 (1.78:1)

Resolution Pass
1080×1920

Duration Pass
0:10, within platform pacing

Hook window audio onset Pass
Onset at 0:00

Safe-zone overlap across full runtime Fail
Key content reaches 32% from top, 8% from bottom — TikTok's safe zone is 8%/24%

Cut frequency vs platform pacing Fail
Only one hard cut detected in 10.2s (0:00 to 0:01); frames 0:01 through 0:10 are static/near-identical with no additional cuts, far below typical short-form pacing of a cut every 1-2s.

Hook window motion detected Partial
The only motion in the 0-4s hook window is the single transition at 0:01 from the ambient room shot to the static product graphic; frames 0:01-0:04 show no further movement.

Hook window face detected Fail
No human face appears in any frame from 0:00-0:04; only a room interior and then a static phone/card graphic.

Hook window text on screen Pass
Bold headline 'KNOW WHAT YOUR CARDS ARE WORTH. Real data for smarter collecting.' is on screen starting at 0:01 and holds through the entire hook window to 0:04.

On-screen text coverage Partial
Headline text block spans roughly the top 25% of the frame (from ~7% to ~32% of frame height) from 0:01-0:10, plus additional small UI text/price figures (\$1,344.60, score 77) lower on the phone screen.

TIER 2 · CONTEXTUAL 1 / 6

Product first appearance Pass
The product (phone app UI showing card valuation) first appears at 0:01, within the hook window.

Product visible duration Pass
The product mockup (phone + physical card) is visible continuously from 0:01 to 0:10, roughly 9 of 10.2 seconds (~88% of runtime).

Message clarity in hook window Pass
By 0:01 the headline 'KNOW WHAT YOUR CARDS ARE WORTH' plus subtext clearly states the value proposition within the 4s hook window.

Native feel vs polished ad Fail
Frames 0:01-0:10 show a highly polished 3D-rendered product mockup with glossy phone render and bold marketing typography; not native UGC-style footage.

Text legibility & hold time Pass
White/yellow bold headline text against a dark background is held unchanged from 0:01 through 0:10 (9+ seconds), well above typical legibility thresholds.

Sound-off redundancy Pass
The headline and subtext at 0:01 fully convey the message ('KNOW WHAT YOUR CARDS ARE WORTH. Real data for smarter collecting.') without requiring audio.

FINDINGS · TIMESTAMPED Click a note to jump

0:00 Native feel vs polished ad TIER 2
Opening frame at 0:00 is a moody ambient room shot with no product or text, giving no immediate context before the hard cut.

0:01 Hook window text on screen TIER 1
At 0:01 the bold headline 'KNOW WHAT YOUR CARDS ARE WORTH.' and subtext appear immediately, clearly stating the offer.

0:01 Product first appearance TIER 2
The app UI on a rendered phone plus a physical trading card graphic both appear starting at 0:01.

0:01 Hook window face detected TIER 1
No human face is present at 0:01 or anywhere in the 0-4s hook window.

0:04 Cut frequency vs platform pacing TIER 1
From 0:01 to 0:04 the frame is completely static with no cuts, pans, or zooms, indicating a lack of pacing typical of TikTok/Reels style ads.

0:09 On-screen text coverage TIER 1
At 0:09 the headline occupies the top ~25% of frame height while price/score text sits mid-lower screen, leaving the card art and lower phone controls visible.

0:10 Text legibility & hold time TIER 2
At 0:10, nearly 9 seconds after first appearing, the headline text is still crisp and fully legible against the dark background.

0:10 Native feel vs polished ad TIER 2
The final frame at 0:10 still shows a glossy 3D-rendered phone mockup, reinforcing the highly polished, non-native production style throughout.

TOP FIX · CLEARS 3 CHECKS

Introduce movement and additional cuts after the initial static hold to sustain attention.

The ad freezes on one static composition from 0:01 to 0:10 with only a single cut at the very start, which will read as sluggish against typical TikTok/Reels pacing and risks early drop-off; adding subtle parallax, card flips, or UI interaction shots every 1-2s would fix both the cut-frequency and native-feel failures.
